

**SYSTEM AND METHOD FOR CUSTOMIZING AND
PROCESSING BUSINESS LOGIC RULES IN A BUSINESS
PROCESS SYSTEM**

ABSTRACT OF THE DISCLOSURE

5 Systems and methods for customizing business logic rules within a business
process automation system and for processing business logic rules in a business process
automation system are disclosed. The method for customizing business rules of a
business logic application generally comprises serving a content page to a client browser
of a client by a server that allows entering and modifying of data relating to a business
10 logic rule, generating data by the server according to a predefined format such as a
predefined XML format from information received via the content page, and
automatically committing the generated data in the predefined format into a database.
Preferably, a verification process such as by using DTDs (Document Type Definitions) is
performed by the server prior to committing the data. The database stores data including
15 data relating to business logic rules for implementing business logic as entries in the
database and the generated data is committed into a corresponding entry in the database.
Upon committing, the committed database business rule entry is ready for execution by
the business logic application.
